Bramatt Computing has extensive experience in the IP network range of products and services. Traditionally CCTV systems were very bespoke, based on analogue technology and required constant maintenance.

Digital network based security camera's are now more popular than ever. Requiring no separate mains power and very little maintenance they are more powerful and easier to support than ever.

Bramatt Computing specialise in the Mobotix, Axis and Milestone range of products and are able to offer solutions to fit all requirement and budgets.

For example you can view your CCTV cameras through any Internet enabled web browser, on a PDA or mobile phone; the options are endless. Why limit yourself to the archaic traditional analogue system when you can integrate it fully into your computer network?

For further information or a product demonstration, please do not hesitate to contact us.
